

Elbee Racing — Kinematics Feature Report

Generated 2026-08-06 02:24 from KinematiK build b3d5226d · Suspension / Dynamics subsystem.

Kinematics — why this was run

• **2026-08-06 02:24** · M. Haddad — Ran Kinematics to chase something the driver reported — vague turn-in through the Michigan sweeper. Changed Front lower inboard Z (mm) (118 → 110), Static camber ° (-1.5 → -2), because we wanted camber recovery back without raising the roll centre. Outcome: we're changing the design.

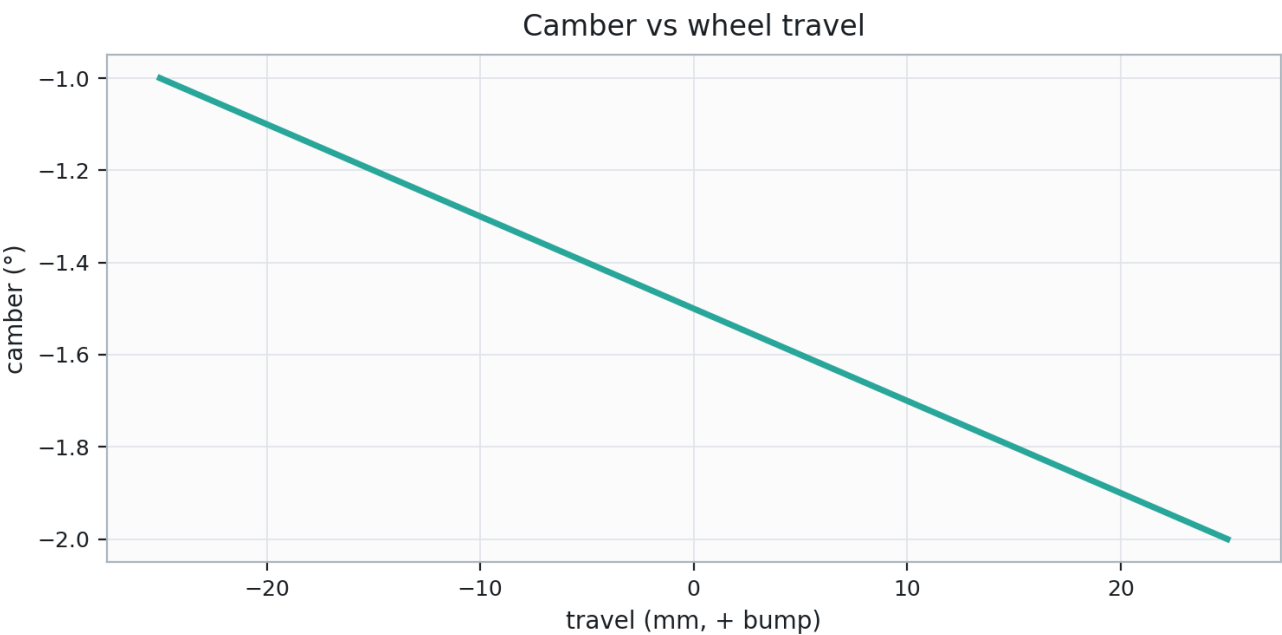

Kinematics — results

Result	Value	Status
Camber gain	-0.20 °/10mm	ok
Bump steer	-0.115 °/10mm	⚠ check

Kinematics — checks & verdicts

• ✓ Bump steer within the 0.1°/10mm target band over full travel

Kinematics — charts & tables

Camber vs wheel travel — camber (°) vs travel (mm, + bump) · 1 series
